

Container Tilter / Container Flipper

The new generation of intelligent container tilters from ZFITA Heavy Industry boasts a rational product structure design, full hydraulic operation, comprehensive auxiliary device functions, customized intelligent operation, and remote network monitoring. Widely applied in warehousing, logistics, and transportation industries—including grain, coal, cement, lime, chemical engineering, ports, and railway freight yards—it effectively addresses the prevailing challenges in container bulk cargo loading and unloading, such as underloading, high labor costs, and low loading efficiency, and has thus become the primary mode and equipment for container bulk cargo handling.

1) ZCF35-DD Single Lane Single-Turn Container Tilter

Product Introduction

ZCF35-DD Single Lane Single-Turn Container Tilter: Developed by our company's researchers based on comprehensive domestic and international similar machinery after two years of R&D, it is a special mechanical equipment dedicated to the flipping, loading and unloading of bulk cargo containers. This equipment adopts hydraulic drive for lifting and flipping, which can realize one-way 90-degree flipping. It is simple to operate, stable in operation and safe and reliable.

Parameter Item	Parameter Value
Rated Lifting Capacity	35/40T
Motor Power	18.5KW
Hydraulic System Working Pressure	25Mpa

hydraulic drive for lifting and flipping, which can realize 180-degree flipping in both left and right directions. I
